DETAILED ACTION

Response to Amendment

1. This action is in response to the amendment E filed on 9/19/2000. Claims 7, 21, 23, 30 and 51 have been canceled and claims 1-6, 8-20, 22, 24-29, 31-50 and 52-65 are pending in the application.

Response to Arguments

2. Applicant's arguments with respect to claims 22, 38-44 and 59-65 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6, 8-20, 22, 24-29, 31-50 and 52-65 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miller (USP 5946647) in view of Shachar (USP 5764736) and Pandit (USP 5859636).

Regarding claims 1-6, 8-20, 22, 24-29, 31-50 and 52-65, Miller discloses a method of performing on a document, such as a word processor, containing text information during

Art Unit: 2664

communication session which comprises the step of parsing (Fig 3, Ref 310 is a parser, Parse information for identifying telephone number, automatically dial the number without the user to enter telephone number), recognized the telephone number (Fig 4) and adding code to form a telephone icon such screen label, a graphic button, highlighted (adding code to create a highlighting for allowing the user to select and dial the telephone number from the computer, See Fig 6) for displaying on the GUI (See col 5, lines 5-50 and col 6, lines 8-25). However, Miller does not disclosed Parsing HTML code and transparently disconnecting from Internet session upon selection of the telephone number and storing a telephone number in the address book. In the same field of endeavor, Shachar discloses transparently disconnecting from the session upon the user clicks on the telephone icon to dial the number (Col 6, lines 1-14); reconnecting a data session when a telephone session is terminated (Col 6, 11-14); pattern-recognizer (See Fig 4a, 410); Internet capable telephone for recognizing a telephone number in the telephone tag "telephone icon" (Col 6, lines 24-26, col 5, lines 52-60); after interpreting the text information and adding code, a web browser will display a web page with all the information such as telephone number with graphic associated with it (Col 5, lines 42-47) and Pandit discloses a step of recognizing a telephone number from any document such as Netscape and storing a telephone number in the address book (See Fig 1f, ref 20);

Since, Pandit suggests a method of recognizing a telephone number from any document such as Netscape (See col 1, lines 42-49) and Miller suggests a document which is generated by an applicant program such as word-processor (See col 3, lines 36-38). Therefore, it would have

Art Unit: 2664

been obvious to one of ordinary skill in the art at the time of the invention was made to applying the method of transparently connecting or disconnecting the communication session and storing a recognized telephone number into an address book as disclosed by Shachar and Pandit into Miller's communication system. The motivation would have been to prevent human error. Furthermore, the method of recognizing a pattern is well known in the art for recognizing the text telephone number.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Nguyen whose telephone number is (703) 308-8848. The examiner can normally be reached on Monday through Friday from 8:30 AM to 5:00 PM.
